

GESTURE GLOVE / module wiring

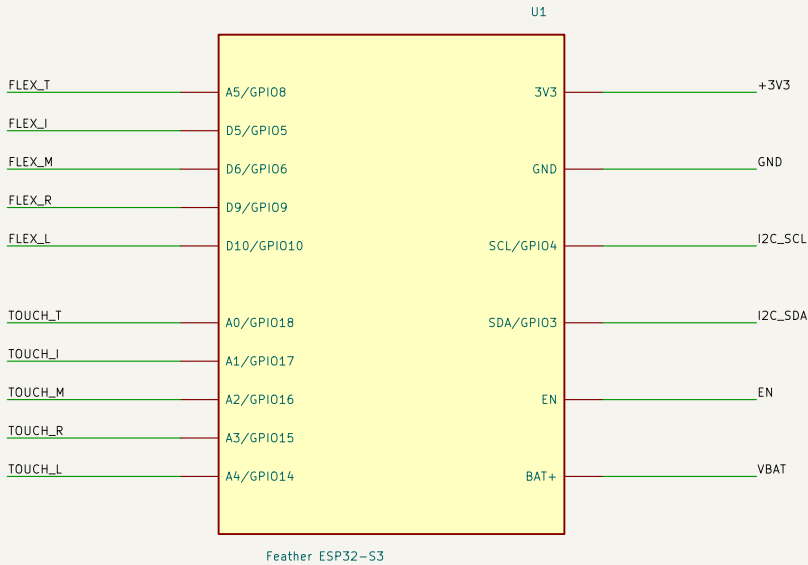

Revision 2 | ESP32-S3 Feather #5323 | conceptual prototype, no custom PCB

1 FINGER BEND SENSORS

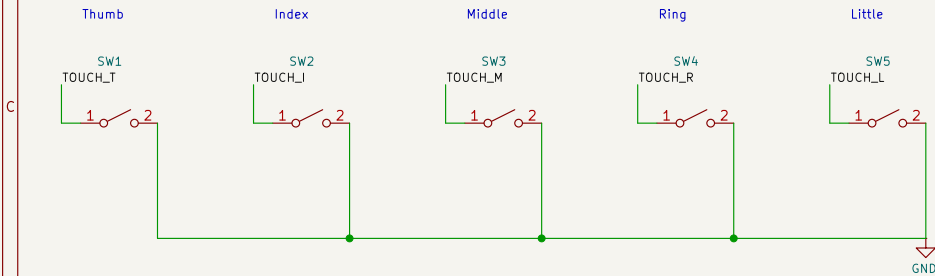

RF1-RF5 = handmade resistive strips. Values require calibration.

2 CONTROLLER

Board pin labels shown; unused headers omitted.

3 FINGERTIP / PALM CONTACTS

Switch symbols represent pads touching the common palm fabric.

Enable INPUT_PULLUP on A0-A4, Touch = LOW. No physical buttons.

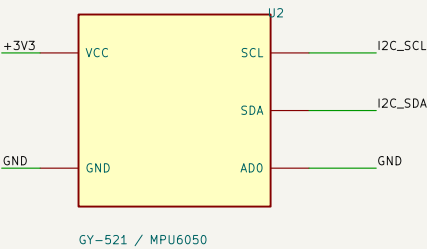

READING THE DRAWING

Green lines are wires. Dots join wires. Identical labels are electrically connected.

3V3 and GND are shared. Five flex readings + five contact states + one IMU.

Module wiring only. Verify DIY sensor range, battery polarity and GY-521 variant before assembly.

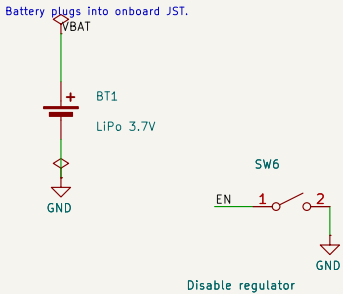

4 MOTION / I2C

ADO to GND: address 0x68.

Check chosen GY-521 accepts 3.3V.

5 POWER

USB-C powers / charges Feather.
